Abstract

In this talk, I will share my experience in offering EMI courses in the Department of Electrical Engineering at NTHU over the past 10+ years. I am mainly responsible for "Digital Signal Processing" and the class size has been over 100 students every year. Students get 3 credits for the course, but in recent years I decided to meet 4 hours every week so that we have adequate time for in-class discussion. In order to create a friendly and comfortable atmosphere for the discussion sessions, I often seek inspiration from TV hosts. To ensure that students will volunteer to share their solution to the problems (in English), we let in-class participation account for 6% of the final grade. This grading policy generally works well in terms of facilitating discussion, but some students objected it in the end and questioned about the fairness. I would like to hear some comments from our friends at NCCU. If time allows, I will also report some of the statistics regarding EMI at different colleges across NTHU, and how we encourage all the colleges to find what EMI means to them, identify their own path to promote it.

Abstract

This presentation addresses the growing dominance of English Medium Instruction (EMI) in higher education, examining its implications for equity, accessibility, and linguistic justice. By surveying and interviewing students and teachers across 17 universities in Thailand and Vietnam, I explore how EMI policies often reinforce linguistic imperialism and prioritize Western perspectives, marginalizing local knowledge systems. English frequently acts as a gatekeeper, fostering nativespeakerism and limiting access for non-native speakers. Using Global Englishes frameworks, I explore how to develop a decolonized, inward-looking approach to internationalization in higher education, promoting an inclusive, equitable alternative that aligns with broader goals of internationalization and linguistic justice.
